Automated testing focuses on automatically testing software in accordance with test engineers’ scheduled plans using test tools or other means. It can cost effectively complete a lot of testing work that would otherwise be very time consuming and expensive if done by hand. There are many factors that need to be considered while performing automated testing such as testing process, testing structure, automatic compilation, and so on. Further, software testing should also be integrated with recent advances in artificial intelligence (AI). This has lead to an emerging research discipline that combines software testing automation and intelligent software testing. This discipline has two aspects: use of AI algorithms in software testing and testing of AI software. This workshop serves as a platform for researchers and practitioners to discuss and exchange ideas of the latest development of theories and techniques in automated and intelligent software testing. It also gives attendees an opportunity to share experiences and lessons learned in applying these theories and techniques to real-life projects in practice.

The topics of interest include, but are not limited to:
- Theories, techniques, and tool support of automated testing
- Application of artificial intelligent algorithms to software testing
- Design and automatic generation of test cases and testing scripts
- AI-based software verification and validation
- AI-based software testing models, prediction, simulation, and evaluation
- Testing of artificial intelligence software

**Important Dates:**
- June 15, 2020 Submission deadline
- July 10, 2020 Author notification

**Submission:**
Authors are invited to submit original, unpublished research papers as well as industrial practice papers. Simultaneous submissions to other publications and conferences are not permitted. The length of a camera ready paper will be limited to eight pages, including the title of the paper, the name and affiliation of each author, a 150-word abstract, and up to 6 keywords. Authors must follow the IEEE Computer Society Press Proceedings Author Guidelines to prepare papers.

**Program Chairs:**
Song Huang                Army Engineering University of PLA, China
Chunrong Fang           Nanjing University, China
Ying Qian            Chongqing University of Posts and Telecommunications, China

**Program Committee:**
Jun Ai                          Beijing University of Aeronautics and Astronautics, China
Zhenyu Chen               Nanjing University, China
Ling Fang                Chinese Academy of Sciences, China
Ke Han                        Beijing Keyware Technology, China
Chiyang Gao                China Software Testing Center, China
